During the penetration test, your friendly auditor was able to acquire SAM and SYSTEM files from one of analyzed servers. Now he shares these files with you because he knows you can perform some analysis. Please find the link below the video and then:

1. Extract hashes from files provided
2. Guess/recover/crack as many passwords as you can.

All files for working with local hashes can be downloaded [here](#)
The password is CQUREAcademy#123!

If you want also play with Active Direcory, the toolset you can find [here](#)
The password is CQUREAcademy#123!

Important: There is NO one and only answer to the Part 2 of this challenge, that is why there is no "Submit" process. BUT if you are eager to share your results and thinking process to the Challenge Part 2, please put it in the comment section below so we can have some discussion about it!
